

## Instructions for how to use Gammeldags wool combs UKM 981 with comb holder

These combs are best used with a comb holder holding one comb to comb medium wool like wool from Ryal, Leicester, Gotland, Gute sheep and more.

### Warning!

The combs teeth can be harmful to both childrens and adults. Be careful when handling the combs.

Start mont the comb holder. The side parts of the holder shall be placed att the edge of the table. Use one or two C-clamps. Put the C-clamp as close to the table edge as possible. A slippery table may need a non-slip mat to secure the combholders position.

For a more secure assembly you can screw the combholder to the ground.

Pre-drill before screwing in the screws.

Install a comb with teeth upwards.

Load the comb, the wool clip-end to handle.

Don't overfill the comb. Half the hight is best. Don't press down the wool.

Release the comb and turn it 90° to the right. Comb with the other comb from top down. Turn the comb to the left and comb again.

The photo shows the comb, without wool, turned to the left.

When you have combed the wool, get a good grip and pull the wool to a top. Use a diz to get the size of top you want. Start pulling the wool from one side. It's easier if you first lift up the combed wool a little. Börja dra ut ullen från ena sidan. det går lättare om du först drar ullen upp mot mitten. Pull the wool-top towards you, get a new grip ner the teeth and pull.

Make a birds nest of the top.

Your top is ready to spin.

## How to take care of your combs

*Even if the comb teeth are made of acid proof, stainless steel, you should allways clean them after use. Use a soft, dry peace of fabric. Store the combs dry, at room temperature.*

We wish you much pleasure with you combs.
